# Matching Ending Items

$

The **$** boundary matcher matches an occurrence of a character/character class/group at the end of a line.

In the above image, the Regex Pattern is matched with the Test String.

Task

Write a RegEx to match a test string, S, under the following conditions:

- S should consist of only lowercase and uppercase letters (no numbers or symbols).

- S should end in `s`.

This is a RegEx-only challenge, so you are not required to write any code.
Simply replace the blank (_____) with your RegEx pattern.
